

CLEAR-BAR™ SYSTEM

THE SAFETYZONE™ CLEAR-BAR™ SYSTEM

The CLEAR-BAR™ System from SafetyZone™ is a mechanical window-protection system that provides metal-bar strength coupled with nearly complete transparency.

That's because the protective window bars are made of transparent polymers that transmit 90% of visible light—similar to glass!

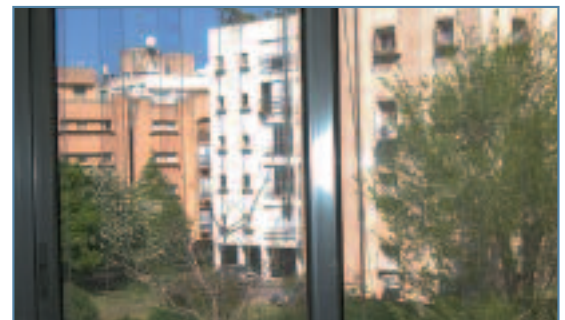

What's more, the CLEAR-BAR System offers long-term durability under normal environmental conditions—with full resistance to UV radiation.

And the corrosion- and maintenance-free aluminum frames are fully color-compatible.

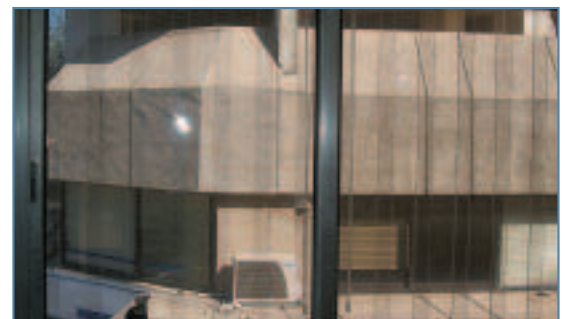

The SafetyZone CLEAR-BAR System. Clearly the right choice for the ultimate in window protection.

THE BENEFITS OF A SAFETYZONE™ CLEAR-BAR™ SYSTEM

- The System is aesthetically integrated within the existing framing system.
- CLEAR-BAR provides excellent protection without the visual obstruction of metal.
- In an interior application, SAFETYZONE includes an integrated anchoring system that severely hampers burglary attempts, allowing the alarm system time to respond.
- The System is the ideal solution for retail storefronts, residential windows, schools, etc.

The Clear-Bar System's protective window bars provide the strength of steel with nearly complete transparency.

The Clear-Bar System allows unobstructed window views both inside and outside the building.
